ImageTracDS 1150

ibml, the leader in production scanning, introduces its first desktop capture solution: the ImageTracDS 1150.

The ImageTracDS 1150 combines outstanding performance with unique features not typically found in a desktop scanner, that together enable organizations to achieve higher productivity levels while reducing costs.

The ImageTracDS 1150 scanner is equipped with two sort trays, which makes it ideal for applications where checks, separator sheets or other sensitive documents must be returned to a customer or that require other special post-scan handling. Organizations can gain significant cost benefits by reducing the amount of paper used in their scan process through the re-use of separator sheets.

The ImageTracDS 1150 scanner provides high-quality and efficient processing by allowing for the scanning of inter-mixed documents and thicknesses in a single pass and reducing document preparation costs. The left-justified rollers allow for faster and easier document preparation using a document jogger. This will automatically ensure all pages are aligned to the upper left corner in a matter of seconds, when compared to the longer time required to center off-size pages for center feed scanners. This means that document prep workers will have fewer exceptions and less steps to contend with when preparing batches for scanning.

The ImageTracDS 1150 scanner also offers multi-feed detection to help eliminate downstream errors. When a double-feed is detected, the ImageTracDS automatically stops to allow for recovery. This multi-feed detection technology ensures that all pages are scanned and eliminates the need for operators to do a post-scan review to account for all images.

The desktop ImageTracDS 1150 delivers exceptional throughput and image quality that are hallmarks of ibml scanners. The scanner provides an approximate throughput up to 150 PPM at 200 dots per inch (DPI). It also offers 24-bit color image capture and output resolutions ranging from 50 to 600 DPI. And the ImageTracDS 1150 provides users the flexibility to output images in the JPEG or TIFF file format.

Software

The ImageTracDS 1150 comes bundled with SoftTrac® ScanDS, a version of the same software that is used on the full-size ImageTrac® scanners. SoftTrac ScanDS improves operational control, scanning accuracy and document processing and allows operators to manage scanning activities from an easy-to-use touch screen. Ideal for a shared services operation, it also provides the ability to manage scanning activities from a single console. This allows customers with both full-size ImageTracs and smaller ImageTracDS devices in their operation, whether local or distributed in a different region of the world, to have the same user interface, reducing set-up time in different environments, increasing productivity and making it easier to manage the operation.

The combination of all these rich features along with the ImageTracDS 1150's surprisingly affordable pricing uniquely positions this total capture solution for low-volume operations with document sorting requirements, high-volume operations requiring an affordable but feature-rich back-up scanner, and centralized operations that need a lower-speed scanner to capture and consolidate images from remote locations.

Key Applications

The ImageTracDS 1150 is ideally suited for a wide range of applications including:

- Remittance processing
- Tax processing
- Claims processing
- Application processing
- Lockbox processing
- Medical records
- Mortgage processing
- Back-file conversion

Return on Investment

The ImageTracDS 1150 scanner provides significant return on investment through:

- Reduced document preparation
- Fewer jams/fast jam recovery
- Increased operator productivity
- Reduced operations expense
- Less downtime/easy maintenance
- Fewer downstream exceptions

The ImageTracDS can also offer a significantly lower cost of maintenance and ownership when compared to other multi-pocket scanners and even some single pocket desktop scanners from other manufacturers. With a duty cycle of 150,000 pages per day, the scanner is designed to be run continually through three daily shifts with minimal downtime.

Unlike other desktop scanners, the ImageTracDS 1150 is equipped with two sort trays and a left-justified feeder. This makes the device ideal for applications with mixed document batches and special post-scan document handling requirements. The ImageTracDS 1150 also includes a version of ibml's SoftTrac Scan, the high-performance capture software with features not typically found on desktop scanners.

Features

- Two sort trays
- Left-justified feeding
- Throughput speeds of up to 150 pages per minute (PPM)
- Duplex camera imaging at 50 to 600 DPI output resolution
- Ultrasonic multi-feed detection
- Document Imprinter (front)
- Color Dropout
- Mixed document scanning
- Bi-tonal, grayscale and color scanning
- JPEG and TIFF file format output
- User-friendly touch screen control
- ImageTracDS software bundle (contact ibml sales for more information)

Software Options

ImageTracDS 1150 is compatible with the full suite of SoftTrac Capture Suite products including DocNetics®, SoftTrac Quality Control, SoftTrac PostScan, high volume Searchable PDF conversion and SoftTrac Analytics.
