

With the PostScan module, SoftTrac® can format images and data then integrate directly into a wide range of systems, including:

- Data entry/automated data capture systems
- Enterprise content management (ECM) solutions
- Image and data archives
- Workflow/business process automation systems

How It Works

SoftTrac PostScan uses a DSN connection to communicate with a SoftTrac-populated SQL database. This allows the application to quickly and easily retrieve images and data from the image repository and database. Providing an even smoother integration, standardized “connectors” allow users to configure SoftTrac batches to be inserted directly into Kofax Capture, TIS eFlow and EMC Captiva.

*Standardized “connectors”
allow users to configure
batches to be inserted directly
into Kofax Capture, TIS eFlow
and EMC Captiva.*

Standard Features

- Combine groups of documents into non-searchable PDF files
- Combine groups of documents into a single multi-page TIFF file
- Automated document re-orientation
- Overlay of a virtual endorsement on a page
- XML output
- Image output based on color detection
- Improve image quality by removing hole punches and borders
- Drop out blank pages
- Text smoothing
- Dog ear removal

Optional Features

- Connector to Kofax Capture system
- Connector to TiS eFlow platform
- Connector to EMC Captiva
- Configurable Data Output
- API Tool
- Custom Development
- PDF Compression module
- Searchable PDF
- Offline Barcode

Let's Get Started

ibml brings together a powerful portfolio of hardware, software and services to deliver document scanning solutions that enable efficiencies and cost-savings for improved business performance and productivity. For more information about our document scanning solutions visit www.ibml.com.
